PhD Theses supervised by Prof. Dr. Marc Paolella, 2008–2021

Asset return prediction and covariance matrix estimation for portfolio selection in large dimensions
De Nard Gianluca
2021

Multivariate non-Gaussian models for quantitative risk and portfolio management
Walker Patrick
2018

Essays on Nonaffine Option Pricing and Random Forests in the Fields of Finance
Wälchli Boris
2015

Empirical essays on risky assets, asset allocation and emission certificates
Doronzo Michele
2015

Mixture Models in Financial Risk Modeling
Krause Jochen
2013

Forecasting Financial Returns Under Non-Elliptical Distributions with Applications to Portfolio Allocation and Risk Management
Polak Pawel
2013

Multivariate volatility modeling and forecasting with stable GARCH and Wishart Autoregressive models
Bonato Matteo
2009

a S.A.F.E.approach to risk: Saddlepoint Approximations in Financial Econometrics.
Broda Simon
2007

Accurate Risk and Density Prediction of Asset Prices
Steude Sven Christian
2007

Supervised MA Thesis by Prof. Dr. Marc Paolella

An Empirical Study of the COMFORT Option Pricing
Zang Langyan
2023

A Systematic Research on the Holiday Effect on China Stock Market
He Yang
2023

The benefits of returns and options in the estimation of GARCH models. A COMFORT insight
Dang Mann Tchi
2023

CME Term SOFR benchmark replication: an empirical analysis
Zhai Chongshuo
2023

Comparison of Value-at-Risk using regime-switching GARCH models for industrial metals futures
Nie Weixian
2023

Extensions on the Fractional Differencing Methodology for Portfolio Construction

Digore Ernest
2023

Enhancing COMFORT with Fractional Difference: An Empirical Study
Zhang Jin
2023

Heterogeneous Tail Multivariate Financial Asset Returns Modeling
Sandmeier Fabian
2022

Two-Stage Portfolio Optimization via Sentiment Analysis and Deep Learning
Liu Jirong
2022

Discrete Multivariate Gaussian Mixture GARCH Models for Financial Asset Allocation
Barcellos Junior Marco Antonio
2022

Forecasting Optimal Gross Leverage for Long-Short Portfolios
Seligmann Jordan Brett
2022

Portfolio optimisation under transaction costs: A comparison of selected methods
Stuber Damai David
2021

An improved feature screening technique for asset selection in the U.S. market
Pepe Federico
2021

De-noised Empirical Asset Pricing via Machine Learning
Lin Shupeng
2021

Applications of Machine Learning in High-Frequency Financial Time Series Prediction
Beeli Rino
2021

Power Analysis of the Ledoit-Wolf Test for Difference in Sharpe Ratios
Chen Wenjia
2021

Joint Optimization of Assets and Currency Exposures in International Markets
Burkhardt Raphael
2020

Financial Risk Indicators based on Conditional Covariance Forecasts
Ding Wanying
2020

Jump Adjusted Optimal Currency Exposure
Haab David Richard
2020

A New Measure of Volatility of Volatility
Jiang Ni
2020

Joint Non-Gaussian Cholesky-GARCH Modeling of Asset Returns and Factors with Applications in Portfolio Optimization
Hain Linda Isabella
2019

Weather forecast and energy prices
Hugentobler Thomas
2019

Generative Adversarial Networks for multivariate return simulation and robust portfolio optimization
Jaupi Megi
2019

The use of Independent Component Analysis for Financial Asset Allocation
Thesling Alice
2019

Industry sentiment effect on the cross-section of Industry returns and Applications in portfolio constructions
Spilioti Danai-Maria
2019

Supervised Learning for Financial Market Predictions
Krepl Jan
2018

Financial Market Anomalies: Acceleration Effect and Gamma Factor
Ferrari Simona
2018

A hybrid least-Squares support vector machines based local neuro-fuzzy model using a feed-forward artificial neural network for class membership weight generation
Waser Martin
2018

Inf ere nee Algorithms for Hidden (Semi) Markov Models
Aschermayr Patrick
2018

Machine Learning Based Views in a Generalized Black-Litterman Framework
Kannenberg Manuel
2017

Filtering of Jumps using Wavelet Decomposition: Application to Portfolio Selection
Kvasnicka Tomas
2017

Calibration of the Implied Volatility Surface using High-Frequency Data
Riviezzo Pasquale
2017

Risk Parity in a Risky, Non-Elliptic World: A Coherent, Non-Gaussian Approach
Ricci Anna
2016

Analysis of Chinese Stock Returns
Wang Mufan
2015

On Reducing the Number of Financial Assets for Portfolio Construction
Ma Xiaowen
2015

Multivariate Asset Return Modeling
Walker Patrick
2015

New Generalized Student t Distribution with Differing Tail Indexes for Each Margin

Näf Jeffrey
2015

Perfect Timing: Dynamic Asset Allocation with Online Change Point Detection
Fiegl Christian
2015

Copula and Simulation Methods for Financial Portfolio Construction
Mittmann Julian
2014

How to roll commodity-futures-contracts: an analysis of different methods optimizing the roll-return
Schwarz Michael
2012

Empirical Option Pricing using High Frequency Data
Vergara Velasquez Daniel
2011

Supervised BA Thesis by Prof. Dr. Marc Paolella

Portfolio Value at Risk Forecasting with GARCH-Type Models
Schlegel Jan Heinrich
2023

Sustainable Alpha? Backtesting ESG Momentum Trading Strategies in the Brazilian Market
Rodrigues Studer Victor Fernando
2023

Statistical Learning for Trend-Following and Momentum Strategies
Matic Danilo
2022

Robust Covariance Matrix Estimation for Financial Portfolio Optimization
Stepanyan Arsen
2022

Jump Induced Tactical Portfolio Allocation
Fetahu Arber
2022

Improving Portfolio Performance by Smoothing Optimal Weights
Tschopp Matthias
2021

Revisiting vol-of-vol: Has the effect changed since its publication and can the method be improved upon?
Van den Bergh Laurin
2021

Piotroski F Score Evidenz in der Schweiz
Demolli Ermal
2021

To hedge or not to hedge: An examination of currency risk for a global investor
Gort Moritz
2020

The Stylized Facts of Factor Returns
Fuchs Bryan
2019

Modeling Conditional Betas with Application in Asset Allocation

Beeli Rino
2019

A regime switching GARCH model with mixed frequency data and exogenous information
Bodmer Timon
2018

Interdependencies of Cryptocurrencies
Florin Laurent
2018

Intra-day return modeling with the MGHyp distribution for portfolio optimization
Barbic Marko
2018

On market timing ability of Switzerland-based mutual funds
Schenk Pascal
2017

Conditions for the application of a geometric-mean portfolio optimization framework subjected to a risk restriciton in contrast to the conventional arithmetic-mean-variance portfolio optimization framework
Stuber Damai David
2017

Managed futures, managed volatility? The joint dynamics of agricultural CTAs assets under management, trend-following strategies, and agricultural commodity futures volatility
Waser Martin
2014

Interaction of EU ETS Price with Electrcity Prices
Galli Sandro L.
2012

Market Price Development of EU ETS carbon allowances
Boller Adrian
2012

Methoden der Risikoberechnung bei Versicherungen
Schneider Georges
2008

Study of nonlinear Value at Riskusing quadratic forms
Franz Nina
2008
